Partnership

Five organisations from Europe are cooperating in the onTrain project.

Universitat Jaume I
Spain (coordinator)

Friedrich Alexander University
Erlangen-Nuremberg
Germany

Group for European Integration
Romania

Università delle LiberEtà
Italy

Learnmera Oy
Finland

About the project

This is an Erasmus+ project of two years duration, had its beginning in November 2018 and will end in October 2020.

The onTrain project "Online training: the treasure within", is inspired by the Jacques Delors report for UNESCO "learning: the treasure within". In this project, we also think that teaching online has great potentialities on education that go beyond the content of the course.

Online training: the treasure within

An Erasmus+ project

Online training: the treasure within

If you are a trainer that wants to start to teach online or you wish to increase your skills and competences on eLearning, this project can be useful for you.

eLearning (that is online education) can improve and extend the supply of learning opportunities; students will be able to keep learning **no matter time and place with the added capabilities online tools and activities can provide, facilitating a rich educational process.**

To reach this, our main aim is to promote the educators' professional and pedagogic competences by training them on virtual teaching and offering examples and practises for what we consider the usual challenges for online teaching. We also want to help educators by providing ICT-based tools for their online educational activities.

Trainers' book

30 units where you will be able to find some eLearning and pedagogy guidelines for adults students. How to take advantage of Information and Communication Technologies activities for education. Also practical examples and suggestions about how to enrich your teaching activities.

Some of the learning units available focus are:
- Lifelong learning online, moving to virtuality. New roles of students and trainer.
- The design of ICT-based activities, course management.
- Motivating the e-learner, net attitudes, soft skills and transversal competences
- Using the learners experience and experiential learning
- Alternative learning methods, using gamification, engaging the student
- Systems for evaluation and assessment.
- Collaborative learning tools, learning from each other.

Online tools

An online course will be available that will include the trainers' book previously presented. In this course, the trainers will learn not only the main concepts about eLearning pedagogy and online teaching, but also they will enjoy "in their own skin" the experience of on-line education, now by being students.

We are producing 10 ICT-based activities in following areas:

- Brainstorming, creativity
- Collaboration and sharing knowledge
- Analyse, understand, problem solving
- Collective discovery, learning together
- Knowledge management, sharing and growth

Our main aim is to facilitate transferability, so trainers can adopt those activities in their own subject / course.

Those will be available free of use. You can include in your LMS platform (as Moodle, using LTI) or use stand-alone accessing www.ontrain.eu

If you want to know more about the project go to www.ontrain.eu or ....
